

## Moulding

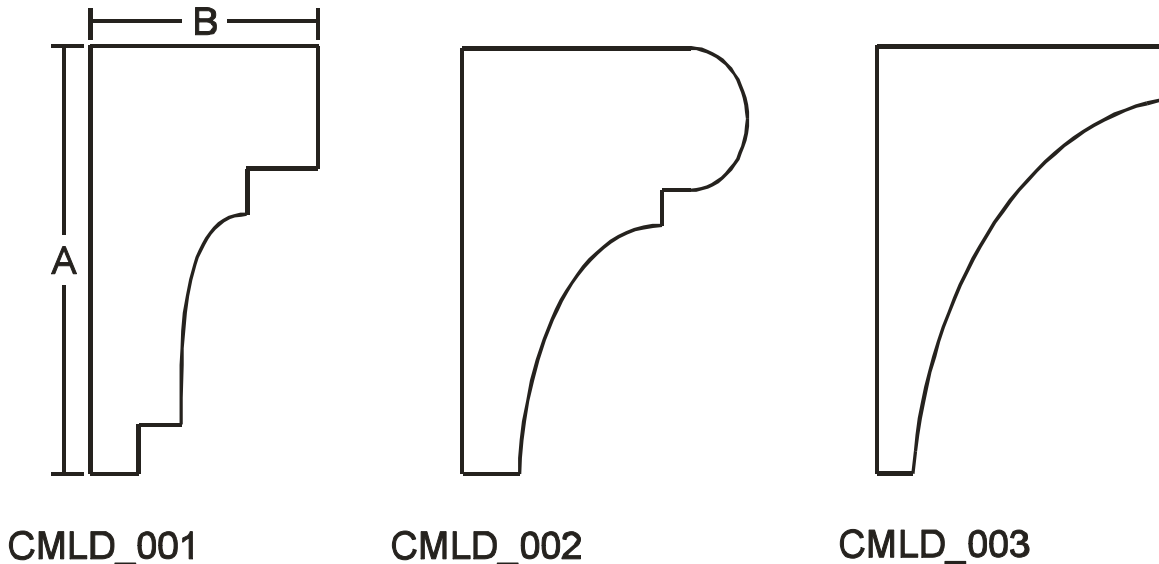

(crown moulding, bands, trim, sills, frieze boards, cornices)

We have combined items such as trim, bands, cornices, frieze boards, and sills under one category because the profiles found here can have multiple purposes. **You may choose from one of these profiles or create your own.**

A key fact to keep in mind when choosing a profile is that shapes exposed to rain, ice, or snow should have a slope so that water does not stand on the shape.

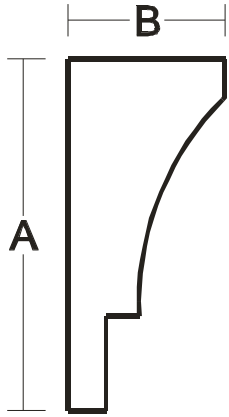

When defining the size of the profile, it is preferred to define only one of the dimensions (either A or B). This allows the other dimension to fluctuate in proportionate terms. However, if you wish to define both the height (A) and the width (B), keep in mind this will change the shape's general appearance.

All mouldings are manufactured in 8 foot lengths.

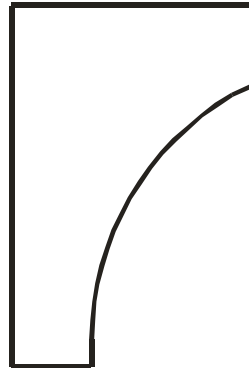

<u>Legend</u>	
<b>A</b>	= Height
<b>B</b>	= Width
